

Process Weighing

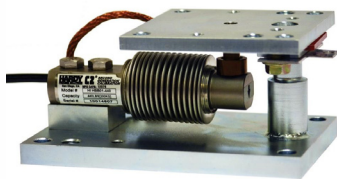

Many Challenges

- Weighing reactor tanks and agitators due to inherent vibration and high dead weight
- Production down time while calibrating Large Silos / Weigh Tanks with standard weights
- Check weighing finished products due to high speed throughput
- Accuracy and Traceability of Batching, Feeding and Dosing based on weight or feed-rate

One Solution

- Waversaver technology, for weighing under vibrating conditions with high dead weight
- Weightless Calibration technology, reduces calibration time from hours to minutes
- Check weighing Controllers and Check weighing lines for speeds up-to 200 pieces / minute
- Weight Controllers, Batching Controllers and Feed Rate Controllers

Your Solution Partner for Hardy in India

KORE MECHATRONICS (P) LTD
