

Endless IoT Possibilities with 24/7 Stable Performance Intel® Atom™ Processor E3900 Series

24/7 Stable Performance as Tough Challenge in IoT Generation

The demand for small form factors for space-constrained embedded application is increasing rapidly. In response to this requirement, DFI gladly introduces you to ultra-small size products which includes industrial motherboards and system-on-modules based on the new generation Intel® Atom™ processor E3900 series (code name: Apollo Lake). Compared to the last generation Atom (N3700 Series), the brand new DFI product family supports harsh environments and narrow space operations with 30% higher performance and impressively optimized energy efficiency. These products are ideally designed for IoT, automation, transportation, and medical applications.
