

DFI's Rugged Product Line Makes Your IoT Solution More Competitive

Recently, more and more devices are connected to each other in IoT networks, creating a large amount of data transmission. To enhance the processing power at edge-computing capability, Intel has launched the newest Atom® processor E3900 series aimed at small and low-power IoT gateway solutions.

DFI has integrated these processors into our new-generation motherboards and modules to create a wide array of rugged and reliable products including Mini-ITX, SBC, Pico-ITX, COM Express, and Qseven. To learn more about DFI's products based on Intel Atom® processor E3900 series, please watch this video.
