Consistent pressure with one turn

New stainless steel functional fitting for the Eisele INOXLINE

The new robust stainless steel pressure regulator from Eisele is designed for applications in aggressive environments and industries with stringent cleaning requirements. Compact and user-friendly - the functional fitting simplifies compressed air supply in industrial and artisan applications.

A completely new design from Eisele is the pressure regulator made of stainless steel 1.4301, first presented at Hannover Messe 2019. It can be used as pressure reducer for supply pressures from 2 to 10 bar, and controls the outlet pressure to the consistent required working pressure. The screw-in fitting from the Eisele INOXLINE has a control pressure range from 2 to 8 bar and is designed for very fine adjustment with low fluctuation. In addition, the flow-optimised pressure regulator reduces the vibration behaviour of the

control system, and it is also designed for quiet operation. The choice of high-quality materials facilitates cleaning. The Eisele pressure regulator is mounted with 1/8-inch threads and can be used for water and air applications.

About Eisele

Eisele Pneumatics GmbH & Co. KG is a multinational family owned company with headquarters in Waiblingen, Germany. With 170 employees, Eisele develops, produces and distributes premium quality solid metal connectors and has become established over the past decades as a leading supplier of innovative connection solutions. The Eisele portfolio – manufactured virtually 100% in Germany – comprises all important standard connection components such as push-in fittings, quick-release couplings and tube fittings, as well as numerous innovative products with unique selling properties that set standards, such as an

Press Release

extensive line of multiple connectors. Worldwide distributors and the subsidiary Eisele Connectors in Michigan, USA, ensure the global availability of Eisele products.
