

Innovalia Metrology shows the M3 experience with its metrological solutions at Metalmadrid.

Innovalia Metrology invites to make the leap forward manufacturing zero defects from 26/27 September at Metalmadrid. Combining software and hardware with the most advanced robotics and metrology, Innovalia Metrology comes to Metalmadrid to present the advantages of both M3MH and M3 Hybrid and thus offer metrological solutions that guarantee maximum profitability and efficiency in production processes.

The combination of the tools proposed by Innovalia Metrology y is assuming a leap forward the future for many companies. Both in the European and international markets, there are a growing needs to optimize production processes, and to eliminate costs and comply more efficiently with quality standards. During the fair, Innovalia Metrology will show to all visitors its M3 technology, thanks to which it has developed its products, allowing to optimize the measurement and production processes. All visitors can satisfy oneself through a real-time demo that how M3 Hybrid has managed to simplify the process of reading and measuring pieces by combining two methods of capturing points (by palpation and optical sensor thanks to Optiscan) with M3 Software.

On the 26th and 27th at 12am, Innovalia Metrology will make the official presentation of its most recent addition to its portfolio at the stand: M3MH. This complete measurement software for machine tools that allows to shortening manufacturing times making it possible to inspect the part inside the machine, opening the door for the user to verify and the set up from an intuitive graphic interface.

Discover with Innovalia Metrology the Metrology 4.0 solutions through the M3 experience!
