Liftronic® Easy-6

The Human Arm Extension

Simple electrical and pneumatic connections

for your own tools. Connection points already in the toolhead.

Trouble Free cables installation

Electrical and pneumatic cables for your custom gripping device pass through the handle support giving a snag-free installation.

Quick change of touch sensitive handle

by means of a single screw.

USB-PC connectivity

For easier communication with the manipulator via a PC.

Touch panel user interface

User friendly and intuitive interface for the visualisation and setting of all operational parameters.

“Float Mode” button

Enhanced safety

If you add your own custom gripping device you can easily implement safety functions by means of our **I-Connect interface module** (optional item).

Easy to Upgrade

Designed to accept controls for your own gripping tools...

...and to easily add the photocell to activate the arm brake (optional item).

Very compact and user friendly!

.....With all these enhancements the INDEVA® Liftronic® Easy remains the most compact and user-friendly intelligent assist device in the market.
